Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

LM75	5
--------------------------------	-------------------

Chapter 2

File Index

2.1 File List

Here is a list of all documented files with brief descriptions:

LM75.cpp		
	LM75 Family Device Driver Library - CPP Source file	13
LM75.h		
	LM75 Family Device Driver Library - CPP Header file	14

Chapter 3

Class Documentation

3.1 LM75 Class Reference

Public Types

- enum `tempUnit_t` { `LM75_TK`, `LM75_TC`, `LM75_TF` }
- enum `setPointType` { `SPT_OVERTEMP`, `SPT_HYSTERESIS` }
- enum `outputPolarity` { `POL_LOW`, `POL_HIGH` }
- enum `outputMode` { `MODE_COMP`, `MODE_INT` }
- enum `opMode` { `OPM_NORMAL`, `OPM_SHDN` }
- enum `faultQueue` { `FQ_1` = 1, `FQ_2` = 2, `FQ_4` = 4, `FQ_6` = 6 }

Public Member Functions

- `LM75` (uint8_t addr=`LM75_I2CDEFAULTADDR`)
LM75 Device class constructor.
- boolean `begin` ()
Initialize the device and the i2c interface.
- double `readTemp` (`tempUnit_t` tunit)
Return the measured temperature in specified units.
- double `readSetPoint` (`tempUnit_t` tunit, `setPointType` spt)
Return the specified setpoint in specified units.
- void `writeSetPoint` (double val, `tempUnit_t` tunit, `setPointType` spt)
Write the specified setpoint supplied in the specified units.
- void `setOutputPolarity` (`outputPolarity` pol)
Set the OS polarity.
- void `setOutputMode` (`outputMode` mode)
Set the OS operation mode.
- void `setOperationMode` (`opMode` mode)
Set the device operation mode.
- void `setFaultQueue` (`faultQueue` fqueue)
Set the value of the OS fault queue.
- double `convCtoK` (double degC)
Convert temperature in degrees C to degrees K.
- double `convCtoF` (double degC)
Convert temperature in degrees C to degrees F.
- double `convKtoC` (double degK)

Convert temperature in degrees K to degrees C.

- double [convFtoC](#) (double degF)

Convert temperature in degrees F to degrees C.

Public Attributes

- Property< uint8_t, [LM75](#) > [busAddr](#)

Private Member Functions

- uint8_t [getAddr](#) (void)
Return the device I2C Bus address.
- uint8_t [read8](#) (uint8_t reg)
Return an 8 bit register value from the device.
- uint16_t [read16](#) (uint8_t reg)
Return a 16 bit register value from the device.
- void [write8](#) (uint8_t reg, uint8_t data)
Write a value to an 8 bit register in the device.
- void [write16](#) (uint8_t reg, uint16_t data)
Write a value to a 16 bit register in the device.

Private Attributes

- uint8_t [_addr](#)

3.1.1 Detailed Description

Definition at line 80 of file LM75.h.

3.1.2 Member Enumeration Documentation

3.1.2.1 enum LM75::faultQueue

Enumerations for fault queue length.

Enumerator

- FQ_1*** fault queue value = 1
- FQ_2*** fault queue value = 2
- FQ_4*** fault queue value = 4
- FQ_6*** fault queue value = 6

Definition at line 110 of file LM75.h.

3.1.2.2 enum LM75::opMode

Enumerations for operating mode.

Enumerator

- OPM_NORMAL*** normal operation mode
- OPM_SHDN*** shutdown mode

Definition at line 106 of file LM75.h.

3.1.2.3 enum LM75::outputMode

Enumerations for output mode.

Enumerator

MODE_COMP OS comparator mode

MODE_INT OS interrupt mode

Definition at line 102 of file LM75.h.

3.1.2.4 enum LM75::outputPolarity

Enumerations for output polarity.

Enumerator

POL_LOW OS output active low

POL_HIGH OS output active high

Definition at line 98 of file LM75.h.

3.1.2.5 enum LM75::setPointType

Enumerations for setpoint registers.

Enumerator

SPT_OVERTEMP overtemp shutdown register

SPT_HYSTERESIS hysteresis register

Definition at line 94 of file LM75.h.

3.1.2.6 enum LM75::tempUnit_t

Enumerations for temperature units.

Enumerator

LM75_TK degrees Kelvin

LM75_TC degrees Centigrade

LM75_TF degrees Fahrenheit

Definition at line 89 of file LM75.h.

3.1.3 Constructor & Destructor Documentation

3.1.3.1 LM75::LM75 (uint8_t i2caddr = LM75_I2CDEFAULTADDR)

[LM75](#) Device class constructor.

constructor

Parameters

<i>in</i>	<i>i2caddr</i>	Device address (default: published value).
-----------	----------------	--------------------------------------------

Definition at line 49 of file LM75.cpp.

3.1.4 Member Function Documentation**3.1.4.1 double LM75::convCtoF (double *degC*)**

Convert temperature in degrees C to degrees F.

Parameters

<i>in</i>	<i>degC</i>	Temperature in degrees Centigrade.
-----------	-------------	------------------------------------

Returns

Temperature in degrees Fahrenheit.

Definition at line 258 of file LM75.cpp.

3.1.4.2 double LM75::convCtoK (double *degC*)

Convert temperature in degrees C to degrees K.

Parameters

<i>in</i>	<i>degC</i>	Temperature in degrees Centigrade.
-----------	-------------	------------------------------------

Returns

Temperature in degrees Kelvin.

Definition at line 251 of file LM75.cpp.

3.1.4.3 double LM75::convFtoC (double *degF*)

Convert temperature in degrees F to degrees C.

Parameters

<i>in</i>	<i>degF</i>	Temperature in degrees Fahrenheit.
-----------	-------------	------------------------------------

Returns

Temperature in degrees Centigrade.

Definition at line 272 of file LM75.cpp.

3.1.4.4 double LM75::convKtoC (double *degK*)

Convert temperature in degrees K to degrees C.

Parameters

<i>in</i>	<i>degK</i>	Temperature in degrees Kelvin.
-----------	-------------	--------------------------------

Returns

Temperature in degrees Centigrade.

Definition at line 265 of file LM75.cpp.

3.1.4.5 uint8_t LM75::getAddr(void) [private]

Return the device I2C Bus address.

Returns

Device address.

Definition at line 173 of file LM75.cpp.

3.1.4.6 uint16_t LM75::read16(uint8_t reg) [private]

Return a 16 bit register value from the device.

Parameters

<i>in</i>	<i>reg</i>	16b Register to read from.
-----------	------------	----------------------------

Returns

Value read from register.

Definition at line 198 of file LM75.cpp.

3.1.4.7 uint8_t LM75::read8(uint8_t reg) [private]

Return an 8 bit register value from the device.

Parameters

<i>in</i>	<i>reg</i>	8b Register to read from.
-----------	------------	---------------------------

Returns

Value read from register.

Definition at line 180 of file LM75.cpp.

3.1.4.8 double LM75::readSetPoint(tempUnit_t tunit, setPointType spt)

Return the specified setpoint in specified units.

Setpoint is returned as a 2's complement value in the most significant 9 bits of a 16 bit field expressed in degrees C to a resolution of 0.125C.

Parameters

<i>in</i>	<i>tunit</i>	Temperature units to convert raw data to.
<i>in</i>	<i>spt</i>	Setpoint type (overtemp or hysteresis)

Returns

Temperature.

Definition at line 93 of file LM75.cpp.

3.1.4.9 double LM75::readTemp (tempUnit_t *tunit*)

Return the measured temperature in specified units.

Temperature is returned as a 2's complement value in the most significant 11 bits of a 16 bit field expressed in degrees C to a resolution of 0.125C.

Parameters

<i>in</i>	<i>tunit</i>	Temperature units to convert raw data to.
-----------	--------------	-------------------------------------------

Returns

Temperature.

Definition at line 73 of file LM75.cpp.

3.1.4.10 void LM75::setFaultQueue (faultQueue *fqueue*)

Set the value of the OS fault queue.

Parameters

<i>in</i>	<i>fqueue</i>	Enumerated OS fault queue programming value.
-----------	---------------	----------------------------------------------

Definition at line 157 of file LM75.cpp.

3.1.4.11 void LM75::setOperationMode (opMode *mode*)

Set the device operation mode.

Parameters

<i>in</i>	<i>mode</i>	Enumerated operation mode.
-----------	-------------	----------------------------

Definition at line 147 of file LM75.cpp.

3.1.4.12 void LM75::setOutputMode (outputMode *mode*)

Set the OS operation mode.

Parameters

<i>in</i>	<i>mode</i>	Enumerated OS operation mode.
-----------	-------------	-------------------------------

Definition at line 137 of file LM75.cpp.

3.1.4.13 void LM75::setOutputPolarity (outputPolarity *pol*)

Set the OS polarity.

Parameters

<i>in</i>	<i>pol</i>	Enumerated OS polarity selection.
-----------	------------	-----------------------------------

Definition at line 127 of file LM75.cpp.

3.1.4.14 void LM75::write16 (uint8_t *reg*, uint16_t *data*) [private]

Write a value to a 16 bit register in the device.

Parameters

<i>in</i>	<i>reg</i>	Register to write to.
<i>in</i>	<i>data</i>	Value to write.

Definition at line 235 of file LM75.cpp.

3.1.4.15 void LM75::write8 (uint8_t *reg*, uint8_t *data*) [private]

Write a value to an 8 bit register in the device.

Parameters

<i>in</i>	<i>reg</i>	Register to write to.
<i>in</i>	<i>data</i>	Value to write.

Definition at line 220 of file LM75.cpp.

3.1.4.16 void LM75::writeSetPoint (double *val*, tempUnit_t *tunit*, setPointType *spt*)

Write the specified setpoint supplied in the specified units.

Setpoint is written as a 2's complement value in the most significant 9 bits of a 16 bit field expressed in degrees C to a resolution of 0.125C.

Parameters

<i>in</i>	<i>val</i>	Setpoint temperature.
<i>in</i>	<i>tunit</i>	Temperature units of the setpoint.
<i>in</i>	<i>spt</i>	Setpoint type (overtemp or hysteresis)

Definition at line 112 of file LM75.cpp.

3.1.5 Member Data Documentation**3.1.5.1 uint8_t LM75::_addr [private]**

Slave address

Definition at line 130 of file LM75.h.

3.1.5.2 Property<uint8_t, LM75> LM75::busAddr

I2C Bus address property

Definition at line 86 of file LM75.h.

The documentation for this class was generated from the following files:

- [LM75.h](#)
- [LM75.cpp](#)

Chapter 4

File Documentation

4.1 LM75.cpp File Reference

[LM75](#) Family Device Driver Library - CPP Source file.

```
#include "LM75.h"
```

4.1.1 Detailed Description

[LM75](#) Family Device Driver Library - CPP Source file. Based on the Melexis [LM75](#) Family Data Sheet 3901090614 Rev 004 09jun2008.

- The current implementation does not manage PWM (only digital data by I2C).
- Sleep mode is not implemented yet.

Note

THIS IS ONLY A PARTIAL RELEASE. THIS DEVICE CLASS IS CURRENTLY UNDERGOING ACTIVE DEVELOPMENT AND IS STILL MISSING SOME IMPORTANT FEATURES. PLEASE KEEP THIS IN MIND IF YOU DECIDE TO USE THIS PARTICULAR CODE FOR ANYTHING.

4.2.2 Macro Definition Documentation

4.2.2.1 `#define LM75_BROADCASTADDR 0`

Device broadcast slave address

Definition at line 55 of file LM75.h.

4.2.2.2 `#define LM75_CONF 0x01`

REGISTER addresses. RAM reg - Configuration

Definition at line 58 of file LM75.h.

4.2.2.3 `#define LM75_CONF_DOM_NORMAL 0x00`

Device operation mode - normal

Definition at line 73 of file LM75.h.

4.2.2.4 `#define LM75_CONF_DOM_SHUTDOWN 0x01`

Device operation mode - shutdown

Definition at line 74 of file LM75.h.

4.2.2.5 `#define LM75_CONF_OSFQUE_1 0x00`

OS fault queue programming value = 1

Definition at line 65 of file LM75.h.

4.2.2.6 `#define LM75_CONF_OSFQUE_2 0x08`

OS fault queue programming value = 2

Definition at line 66 of file LM75.h.

4.2.2.7 `#define LM75_CONF_OSFQUE_4 0x10`

OS fault queue programming value = 4

Definition at line 67 of file LM75.h.

4.2.2.8 `#define LM75_CONF_OSFQUE_6 0x18`

OS fault queue programming value = 6

Definition at line 68 of file LM75.h.

4.2.2.9 `#define LM75_CONF_OSOM_COMP 0x00`

OS operation mode - comparator

Definition at line 71 of file LM75.h.

4.2.2.10 `#define LM75_CONF_OSOM_INT 0x02`

OS operation mode - interrupt

Definition at line 72 of file LM75.h.

4.2.2.11 #define LM75_CONF_OSPOL_AH 0x04

OS polarity selection active HIGH

Definition at line 70 of file LM75.h.

4.2.2.12 #define LM75_CONF_OSPOL_AL 0x00

OS polarity selection active LOW

Definition at line 69 of file LM75.h.

4.2.2.13 #define LM75_CONF_RES 0x00

CONFIGURATION bits masks. Manufacturer reserved bits

Definition at line 64 of file LM75.h.

4.2.2.14 #define LM75_I2CDEFAULTADDR 0x48

Device default slave address

Definition at line 54 of file LM75.h.

4.2.2.15 #define LM75_TEMP 0x00

RAM reg - Temperature

Definition at line 59 of file LM75.h.

4.2.2.16 #define LM75_THYST 0x02

RAM reg - Hysteresis

Definition at line 61 of file LM75.h.

4.2.2.17 #define LM75_TOS 0x03

RAM reg - Overtemperature shutdown threshold

Definition at line 60 of file LM75.h.
